

CS300 Presentation

Event Scheduler

Rajnesh Kumar Meena
13546

Motivation

- Need to login everyday (IITK mailbox).
- Need to enter captcha every time you login.
- Scan all the recent mails every time to check schedule. (You don't need to if you have good memory :p)
- Finally you may get the schedule.
- You can note down every event with its schedule or you can just to do what, use our app to check it.

Idea

The main idea of our application is to collect the information related to all the events happening in our campus in just one place. You can just go to our app find every detail of the upcoming events.

Our application will use some simple Machine Learning techniques and Natural Language Processing to organise the information which we will receive from your IITK mailbox.

What exactly it is?

Our application will be simple web application which you can access from your browser. Your mailbox will be connected to our application (for sign in). It will collect all your mails from your mailbox. Process all lines of text in every recently received mail using some machine learning and natural language processing to get desired information. Finally it will show you the information in a very simple and elegant way using our simple user interface of our app.

Features

- Login once and forget.
- You check you schedule for all upcoming days sequentially.
- Information shown will include date, time and venue of the event.
- You will receive notification every time a new mail is received in your mailbox regarding some event.
- Will save your time 😊

Thank you for your patience.
